

Important Questions for MID 1

Subject: Web and Database Security

1. How digital signatures differ from authentication protocols?
2. Explain about different web attacks?
3. Explain about system security, web security and network security?
4. What is meant by web security problem?
5. Differentiate Security vulnerability, threat and Risk?
6. State the difference between threats and attacks?
7. What is the significance of cryptography in view of web security and what are the legal restrictions on cryptography?
8. Explain in detail how Kerberos and Diffie Hellman Exchange Alg can be used for authentication?
9. Point out the how the Digital Signature Service and confidentiality are provided by PGP. Differentiate between PGP and S/MIME.
10. Explain different cryptographic protocols.
11. Explain privacy-protecting techniques.
12. Explain how to secure web applications.
13. Explain about risk analysis and best practices for web security.
14. Which are the different types of backups? Explain each.
15. Explain several different types of attacks on data and discuss the approaches for protecting against these attacks.
16. Write one example of each of following signature of common vulnerabilities in application code base.
(i) cross-site scripting (ii) Denial of Service (iii) Phishing (iv) SQL Injection
17. Describe the security measures to be taken for a good password as an authentication mechanism.
18. Write in detail various password management mechanisms for web and database applications.
19. Illustrate briefly about the security mechanisms
(a) Enhanced Security Services for S/MIME, (b) MIME (c) PGP

Important for MID 1:

1. What is the significance of cryptography in view of web security and what are the legal restrictions on cryptography?
2. Explain different cryptographic protocols.
3. Discuss in detail about privacy-protecting techniques.
4. a. Explain how to secure web applications.
b. What are the different types of backups.
5. a). Differentiate Security vulnerability, threat and Risk?
b) Define system security, web security and network security?
6. Explain in detail how Kerberos and Diffie-Hellman Alg can be used for Authentication
7. Write one example of each of following signature of common vulnerabilities in application code base.
(i)cross-site scripting (ii) Denial of Service (iii) Phishing (iv) SQL Injection

Assignment 1 Questions:

1. Explain different cryptographic protocols.
2. Explain privacy-protecting techniques.
3. Which are the different types of backups? Explain each.
4. Explain several different types of attacks on data and discuss the approaches for protecting against these attacks.
